

I am not only a subscriber to XM Radio, but am also an over the road trucker. Satellite radio is one of the best innovations for the trucker in years! One of the main reasons that I use XM is for the safety it provides for me. I can learn of adverse weather conditions as well as traffic accidents and tie-ups in and around the major cities, well before I get there and get involved. With this information I can alter my route if necessary. and not blindly drive into a possibly dangerous situation.

So many of our loads today are very time-sensitive and having advanced knowledge of the weather and traffic conditions helps me get it there safely and on time. Let's think a minute about safety and common sense!

Please, Please reject NAB's petition 04-160, and support satellite radio on their attempt to promote safety!

Also keep in mind the FIRST AMENDMENT of our Constitution!!!!
